

Our highly-skilled, international technical team works in an agile environment using cutting edge technologies. Together, we develop and shape our unique range of products. In this setting, it's crucial that every single team member actively contributes his or her own ideas toward the success of the whole company.

In order to ensure the best performance, our tech team in Munich is looking for a

Java Backend Developer (f/m/x)

These tasks are waiting for you:

- Develop and maintain our existing backend system
- Design and implement new software components using our current tech stack
- Continuous evaluation and improvement of technology decisions and implementation strategies

Our tech stack

- Java 8 with Spring Framework 4 and Hibernate 5
- Elasticsearch, Kibana and Logstash 5
- Percona XtraDb Cluster 5.7
- Kafka, Redis, Docker, Zabbix, CentOS 7

What we offer to you:

- Working in an international, open-minded team, you'll be consistently inspired by experienced professionals
- We encourage you to constantly contribute your own ideas
- Both professional and personal development
- Flexible working hours on a base of trust
- A modern office located in the heart of Munich at Prinzregentenplatz

Required skills:

- Bachelor's degree in Computer Science or comparable disciplines
- 3 to 5 years of experience in developing and running distributed applications
- Strong knowledge of Java 8, Hibernate, Spring Framework and database management systems (e.g. MySQL)
- Experience with Elasticsearch 5 and Kafka would be nice-to-have
- Highly interested in learning and experiencing brand new stuff
- Fluent in English (German skills are advantages but not required)
